SCHOLARBRIDGE / RESEARCH CONSULTANCY

Good questions. Rigorous research.

Research guidance for independent scholarship.

United Arab Emirates | International enquiries welcome

About ScholarBridge

ScholarBridge offers methodological, analytical and editorial guidance for PhD researchers, master's students, faculty, independent researchers and research institutions. Our approach emphasizes appropriate methods, clear interpretation and researcher independence. Project-specific expertise and availability are confirmed during scope review.

Research consultancy services

Research design and methodology • Statistical analysis and interpretation • Questionnaire development • Systematic literature reviews • Academic manuscript editing • Doctoral research mentoring

Methodology and analytical capabilities

Scope-dependent support includes quantitative, qualitative and mixed-methods design; SPSS, SmartPLS, R and Python; PLS-SEM; confirmatory factor analysis; reliability and validity; mediation and moderation; regression and panel-data econometrics; fixed-effects and random-effects models; fsQCA; robustness checks; research charts and tables.

Literature and scholarly communication

Support can include PRISMA 2020 workflows, database search strategies, screening and extraction matrices, thematic synthesis, bibliometrics where appropriate, academic English editing, reference checks, journal selection guidance and reviewer-response preparation.

A clear process.
An ethical partnership.

How consultation works

1. Send a non-sensitive summary, service needs and timeline.
2. Discuss fit, methods and practical constraints.
3. Approve a written scope, quotation, deliverables and schedule.
4. Receive agreed consulting support and review next steps together.

Research areas and disclosure

Research interests include AI and sustainable logistics, supply-chain analytics, digital connectivity and food loss, cold-chain resilience, BRICS energy and carbon emissions, climate resilience and digital transformation. These are research areas, not claims of completed ScholarBridge work, authorship, verified findings or publications. Project examples are omitted from this brochure pending documented public-distribution authorization.

Academic integrity

We support independent research and transparent methods. We do not provide ghostwriting of assessed work, fabricated results, purchased authorship or guaranteed publication. Journal acceptance and academic outcomes are determined independently.

Confidentiality and expectations

Agree document access, a suitable transfer method and retention arrangements before sharing research material. Do not send participant data or protected manuscripts through the initial enquiry form. Consultation dates are requests until personally confirmed; no live calendar service is connected.
